📁 Professional Experience

Research Assistant, *Gregorius Natanael Elwirehardja* ✍ 12/2024 – Present

- Performed feature extraction and engineering from video data to identify facial expressions associated with depression symptoms.
- Developed and trained Artificial Neural Network (ANN) models for classifying patients' likelihood of depression.

📁 Projects

Obesity Levels Classification ✍

- Built and deployed an obesity classification app (Streamlit + Docker), achieving **94% accuracy** with Random Forest and **82%** with a tuned Neural Network optimized via Optuna.
- Improved hyperparameter tuning efficiency by replacing GridSearch with Optuna for the Neural Network model, cutting experimentation time while maintaining strong performance.

Air Quality Forecasting

- Developed an LSTM-based time-series model to predict air quality one hour ahead, achieving a **95% R² score** by fine-tuning hyperparameters with Optuna.

Price Adjustment Model ✍

- Built a machine learning model to automate price adjustments using features such as production cost, stock, demand rate, competitor pricing, and profit margin.
- Designed and generated a synthetic dataset to simulate real-world conditions.
- Achieved **99% R² score**, with hyperparameters optimized via GridSearchCV.

🏆 Awards

Third Place for Data Visualization, *Binus Data Science Club* ✍ 17/12/2023
Made a dashboard using power BI

📄 Certificates

- Microsoft Certified Azure AI Fundamentals ✍
- NVIDIA: Fundamentals of Deep Learning ✍

📖 Courses

Foundations: Data, Data, Everywhere, *Google* ✍ 03/2024

Ask Questions to Make Data-Driven Decisions, *Google* ✍ 04/2024

Data Analysis with R Programming, *Google* ✍ 05/2024

Process Data from Dirty to Clean, *Google* ✍ 08/2024
